PROFILE

I start things. Brands, websites, AI tools, businesses. I studied Software Engineering and Marketing together and use both every day: I design in Figma, write the code, run the ads that send people to it, then keep testing after launch. Most of my current work is Webflow migrations into headless builds with a CMS behind them, plus rebuilds and the conversion work that follows.

EXPERIENCE

Digital Marketing Specialist | Internet Goods (digital agency)

Jun 2026 – Present

- Migrate client sites from Webflow into headless custom builds with a CMS, designing in Figma and writing the front end myself.
- Built the agency's AI migration tooling: a custom Claude skill, instruction file and prompt, tested on real client sites and documented as an SOP. First working build dropped to **around 10 minutes** and is now the team's default.
- Own the full rebuild of a **100+ page** international education site solo: CMS migration, a new booking and enquiry system, translated versions and on-page SEO.
- Split that site into two journeys after finding parents drive the decision for under 18 enrolments, then built the pages that answer what parents worry about.
- Run UGC creator partnerships for client campaigns, selecting creators for audience and brand fit, briefing them and managing delivery.

Junior Content Coordinator | OneMed Group (cpapsales.com.au)

Mar 2025 – Feb 2026

- Owned cpapsales.com.au end to end across design, build, content and performance, growing sales **20%** and cutting bounce rate **12%**.
- Rebuilt the journey around an older customer base who prefer to phone, adding a prominent call option at the points where people were hesitating.
- Inherited an acquired business with long-standing loyal customers, so kept navigation and product findability familiar while modernising the rest.
- Ran continuous A/B testing on product pages, forms and calls to action, using behavioural analytics to find where people left the funnel.
- Replatformed the site from WordPress to Shopify with no interruption to trading, rebuilding the product catalogue and delivering on-page SEO and metadata throughout.
- Researched competitor pricing and positioning across the category to find the gaps worth targeting, and reported on performance to decide what to change next.

Web Designer and Developer | Lula Group

Jan 2026 – Aug 2026

- Owned **15+ website projects** end to end across Shopify, WordPress and Wix, from Figma through to launch, making the layout, navigation and page structure decisions on each.

Software Engineer Intern | City Quokka

May 2026 – Present

- Build front-end features in Next.js and TypeScript within an existing codebase and design system, working with the UX designer, product manager and engineering team.
- Rebuilt the blog publishing flow in the CMS after sitting with the marketing team: fixed spacing controls, added internal linking and implemented AI-generated meta titles and descriptions. New marketers now publish without asking questions.

Founder | Sekala Studio

2026 – Present

- Run a web design and Shopify studio for growing businesses, handling positioning, scoping, design, build and delivery.

Marketing Assistant | BMJ Group

Nov 2025 – Present

- Plan and run Meta and LinkedIn advertising. A recent campaign returned **3,481 landing page views** and over 6,400 link clicks from GBP 250 of spend, at a 2.5% click through rate against a 1% benchmark.
- Built a lead generation campaign across **55 institutions**, covering audience segmentation, KPI targets and the channel plan behind a GBP 5,000 budget.
- Build and test landing pages in Unbounce, run segmented email campaigns and automated journeys, and track spend and performance against targets.

Founder | Virago (consumer brand, Indonesia)

2020 – 2022

- Built a brand from nothing and grew it to **24,000 followers** and over **700,000 likes** by testing content against engagement data.

PROJECTS

Pet Insurance Coverage Checker | React, Vite, Tailwind, Claude API

2026

- Built a tool that reads real policy documents and answers coverage questions in plain English.

Short-Form Content Curation App | Product Manager and UX Designer

2026 – In progress

- Found the problem myself as a marketer and defined the product: save short-form videos, get an AI breakdown of why each one works, then turn it into a shootable brief for your own brand.
- Own the product and the design on a team of software engineers, covering scope, requirements, the classification taxonomy behind the AI analysis, and the full UX and interface in Figma.

E-commerce Purchase Propensity Model | Machine Learning

2025

- Ranked user sessions by purchase likelihood from clickstream data, evaluated with Precision@K and Lift to reflect a real campaign budget.

SKILLS

Build: HTML, CSS, JavaScript, TypeScript, React, Next.js, Astro, Liquid, Git | responsive, mobile-first, page speed, on-page SEO

Headless & CMS: Payload, Sanity, Keystatic | headless builds with a decoupled front end | Shopify, WordPress, Wix, Webflow, Unbounce | platform migrations off Webflow and WordPress

Design: Figma, layout and hierarchy, user flows, customer journey mapping, prototyping, design systems, Canva

Convert: A/B testing and experimentation, conversion rate optimisation, landing page builds, funnel and behavioural analysis, performance reporting

Market: Meta Ads, LinkedIn Ads, paid social strategy and optimisation, lead generation campaigns, audience targeting and segmentation, email campaigns and automated journeys, campaign reporting and ROI, competitor and market research, copywriting, HubSpot, Klaviyo

AI: Claude Code, Claude custom skills and MCP connectors, Cursor, ChatGPT, Gemini, n8n, AI-assisted development and workflow automation

Learning: GTM and GA4, which I will have running before I start

EDUCATION

University of Technology Sydney

Feb 2022 – Nov 2026

Bachelor of Business (Marketing) and Software Engineering (Honours) | **Distinction WAM 5.95/7** | 50% International Baccalaureate Scholarship
